Obstructive Sleep Apnea Surgical Treatment

Date of Origin: 07/2002  Last Review Date: 02/22/2023  Effective Date: 04/01/2023

Developed By: Medical Necessity Criteria Committee

I. Description

Airway obstruction during sleep is a commonly recognized problem. Obstructive sleep apnea (OSA) is the most common breathing related sleep disorder. OSA is characterized by repetitive episodes of airway obstruction due to the collapse and obstruction of the upper airway during sleep. In patients with OSA, the normal pharyngeal narrowing is accentuated by anatomic factors, such as a short neck, elongated palate and uvula, large tonsils and redundant lateral pharyngeal wall mucosa. The hallmark symptom of OSA is excessive snoring. The snoring abruptly ceases during the apneic episodes and during a brief awakening period and then resumes when the patient falls asleep again.

When noninvasive treatment such as continuous positive airway pressure (CPAP) fails to adequately treat OSA or is not tolerated by the patient, surgical intervention may be warranted. The most common form of surgical management in treating OSA is an uvulopalatopharyngoplasty (UPPP). UPPP involves resection of the mucosa and submucosa of the soft palate, tonsillar fossa, and the lateral aspect of the uvula. The UPPP enlarges the oropharynx but cannot correct obstructions in the hypopharynx. Other minimally invasive surgical procedures have been investigated as treatments for OSA; however, inadequate data exists to establish long-term effectiveness.

II. Criteria: CWQI HCS-0054

A. Moda Health will cover Uvulopalatopharyngoplasty (UPPP) to plan limitations when ALL of the following criteria are met:
   a. The patient has 1 or more of the following indications:
      i. Moderate to severe obstructive sleep apnea diagnosed by a sleep study within the past two years prior to any proposed surgery
      ii. Narrowing or collapse of retropalatal region
      iii. Apnea Hypopnea Index (AHI) ≥ 15
      iv. AHI between 5 and 14 with 1 or more of the following:
         1. Excessive daytime sleepiness
         2. Insomnia
3. Impaired cognition  
4. Mood disorders  
5. Documented hypertension  
6. Ischemic heart disease  
7. History of stroke  

b. Patient must have completed medical therapy with **ALL** of the following:  
   i. Adequate response to CPAP therapy but unable to tolerate CPAP device (inability to relieve symptoms with CPAP or autoPAP indicates apnea not due to obstruction)  
   ii. Maximal treatment of underlying disease  
   iii. Other appropriate non-invasive therapy  
   iv. Oral Appliance with **1 or more** of the following results:  
      1. Failure to improve symptoms  
      2. Intolerance of device  
      3. Device inappropriate given patient’s anatomy  
   v. Weight not an issue or weight loss tried and failed in obese patients  

c. Excessive daytime sleepiness that is not explained by other etiologic factors.  

d. The requested procedure does **NOT** include lingual or pharyngeal tonsillectomy as they are considered experimental and investigation for the treatment of OSA. A tonsillectomy is considered an integral part of the UPPP and is **NOT** separately billable.  

e. Any surgical procedure for simple snoring in the absence of OSA is considered **NOT** medically necessary and not included in the request.  

f. The request does **NOT** include radiofrequency volumetric tissue ablation of the soft palate, uvula, tongue base, or of the nasal passages, turbinates and/or soft palate (Somnoplasty™ or Coblation) as they are considered investigational and not covered by Moda Health.  

g. The request does **NOT** include **ALL** of the following investigational procedures:  
   i. The Repose System, a minimally invasive technique involving tongue base suspension  
   ii. Injection Snoreplasty; an injection of sclerosing agent into the soft palate  
   iii. Palatal stiffening procedure including but not limited to:  
      1. Cautery-assisted palatal stiffening operation (CAPSO); or  
      2. Palatal implant (Pillar™ Palatal Implant System)  
   iv. Transpalatal Advancement Pharyngoplasty  
   v. Laser-assisted uvulopalatopharyngoplasty (LAUP)  

B. Moda Health considers hypoglossal nerve stimulation (e.g. Inspire upper airway system, Inspire II system) medically necessary for treatment of **moderate to severe** obstructive sleep apnea (OSA) when **ALL** of the following requirements are met:  
   a. Member is 18 years of age or older; **and**  
   b. BMI is less than 32 kg/m²; **and**  
   c. A sleep study is performed within 24 months of first consultation for Inspire implant, **and**  
   d. Apnea hypopnea index (AHI) is 15-65 events per hour; **and**  
   e. Member has predominantly obstructive events (described as central and mixed apneas less than or equal to 25% of total AHI); **and**  
   f. Absence of complete concentric collapse at the soft palate level as seen on a drug induced sleep endoscopic (DISE) procedure; **and**  
   g. Member has no other anatomical findings that would compromise performance of device.
C. Hypoglossal nerve neurostimulation is considered NOT medically necessary for all other indications
D. Non-FDA approved hypoglossal nerve stimulation devices considered experimental and investigational for treatment of adult obstructive sleep apnea include ALL of the following (not an inclusive list);
   a. Apnex Hypoglossal Nerve Stimulation (HGNS) system
   b. Aura6000 Neurostimulation system
   c. Wellstar upper airway stimulation implant
   d. ImThera’s Targeted Hypoglossal Neurostimulation Therapy

III. Information Submitted with the Prior Authorization Request:
   1. Sleep study interpretation
   2. CPAP trial results
   3. Medical records from treating provider documenting all non-invasive treatment and co-morbid conditions.

IV. Applicable CPT or HCPC codes covered:

<table>
<thead>
<tr>
<th>Codes</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>42140</td>
<td>Uvulectomy, excision of uvula</td>
</tr>
<tr>
<td>42145</td>
<td>Palatopharyngoplasty (e.g. uvulopalatopharyngoplasty, uvulopharyngoplasty)</td>
</tr>
<tr>
<td>64582</td>
<td>Open implantation of hypoglossal nerve neurostimulator array, pulse generator, and distal respiratory sensor electrode or electrode array</td>
</tr>
<tr>
<td>64583</td>
<td>Revision or replacement of hypoglossal nerve neurostimulator array and distal respiratory sensor electrode or electrode array, including connection to an existing pulse generator</td>
</tr>
<tr>
<td>64584</td>
<td>Removal of hypoglossal nerve neurostimulator array, pulse generator, and distal respiratory sensor electrode or electrode array</td>
</tr>
</tbody>
</table>

V. CPT or HCPC codes NOT covered:

<table>
<thead>
<tr>
<th>Codes</th>
<th>Description</th>
