Manual: Reimbursement Policy

Policy Title: Postoperative Sinus Endoscopy and/or Debridement Procedures

Section: Surgery
Subsection: None

Date of Origin: 10/1/2009
Last Updated: 3/11/2020

Policy Number: RPM009
Last Reviewed: 3/11/2020

Scope

This policy applies to all Commercial medical plans, Medicare Advantage plans, and Oregon Medicaid/EOCCO plans.

This policy applies only to physicians and other qualified health care professionals. The global surgery package concept does not apply to facilities.

Reimbursement Guidelines

A. Summary Policy Statement:

Postoperative sinus endoscopies (31231) and postoperative sinus debridements (31237, S2342) are eligible for separate reimbursement in a limited set of circumstances:

1. For dates of service 1/1/2020 and following:
   a. When Medical Necessity Criteria requirements are met ((see “Post-operative Sinus Endoscopy and/or Debridement Procedures,” Moda Health Medical Necessity Criteria).
   b. One of the following applies:
      i. When all of the procedure codes performed at the original surgical session have zero follow-up global days.
      ii. When any one of the original surgical procedures carry a global period of 10- or 90-days, and the postoperative sinus endoscopy/debridement is not submitted with modifier 79 (unrelated) appended.

2. For dates of service 12/31/2019 and prior:
   a. When all of the procedure codes performed at the original surgical session have zero follow-up global days.
b. When any one of the original surgical procedures carry a global period of 10- or 90-days, and the postoperative sinus endoscopy/debridement is submitted as a staged or a related procedure.

B. Global Surgery Package

1. Moda Health considers postoperative sinus endoscopies (31231) and postoperative sinus debridements (31237, S2342) to always be related to all the nasal and sinus procedure codes performed at the original surgical session.

2. The longest global period for any procedure code from the original date of surgery applies to the entire surgical session and all subsequent services until the global period is complete.

3. Services may not be “unrelated” to the procedure code creating the postoperative global period and also “related” to another procedure code performed by the same physician during that same original surgical session.

4. Correct modifier coding is necessary. Either the failure to use a needed modifier when appropriate or the incorrect use of a modifier when not appropriate may result in denial of the subsequent surgery.

C. Reporting Postoperative Sinus Endoscopies and/or Debridements

1. When all of the procedure codes performed at the original surgical session have zero follow-up global days, then postoperative sinus endoscopies and/or debridements should be reported without appending modifiers 58, 78, or 79.

2. When any one of the original nasal or sinus surgical procedures carry a global period, postoperative sinus endoscopies and/or debridements are always considered related to the original nasal/sinus surgical procedures.

   a. Postoperative sinus endoscopies (31231) and/or debridements (31237, S2342) may be submitted as a staged procedure (modifier 58 attached).

      i. The staged relationship needs to be supported in the medical record with documentation of the anticipated need for probable endoscopy and/or debridement procedures.

      ii. If modifier 58 is not appended to the office surgery code, then the endoscopy/debridement procedure code will be denied as included in the surgical global payment for the original nasal or sinus surgical procedure(s), per RPM011, section I.2.

   b. Postoperative sinus endoscopies (31231) and/or debridements (31237, S2342) which require a return to the operating room may be submitted as a related procedure with modifier 78 attached.

      i. Modifier 78 may not be submitted with POS 11.
ii. Postoperative sinus endoscopies (31231) and/or debridements (31237, S2342) performed in the office (POS 11) or otherwise not requiring a return to the operating room need to be documented and submitted as staged procedures.

c. Modifier 79 is not valid when attached to CPT codes 31231, 31237, S2342 for any sinus endoscopy and/or debridement performed within that global period. The use of modifier 79 in this circumstance to characterize 31231, 31237, or S2342 as “unrelated” to the procedure code with the global period is inaccurate, and an inappropriate use of modifier 79. The sinus endoscopy or debridement is related to the surgical session with the global period, regardless of which procedure code the surgeon deems the endoscopy/debridement to be related. (Moda Health) Postoperative sinus endoscopies and/or debridements are not eligible for separate reimbursement when modifier 79 is used. (AAO-HNS)

Moda Health will deny 31231-79, 31237-79, or S2342-79 as an invalid procedure code-modifier combination. Provider appeals will only be approved if the written documentation submitted for review shows that the original surgery creating the global period was performed on a body part other than the nasal or sinus structures.

### Codes and Definitions

<table>
<thead>
<tr>
<th>Code</th>
<th>Description</th>
</tr>

<tbody>
<tr>
<td>31231</td>
<td>Nasal endoscopy, diagnostic, unilateral or bilateral (separate procedure)</td>
</tr>
<tr>
<td>31237</td>
<td>Nasal/sinus endoscopy, surgical; with biopsy, polypectomy or debridement (separate procedure)</td>
</tr>
<tr>
<td>S2342</td>
<td>Nasal endoscopy for postoperative debridement following functional endoscopic sinus surgery, nasal and/or sinus cavity(s), unilateral or bilateral</td>
</tr>
</tbody>
</table>

**Modifier 58**

Staged or Related Procedure or Service by the Same Physician During the Postoperative Period: The physician may need to indicate that the performance of a procedure or service during the postoperative period was: a) planned or anticipated (staged); b) more extensive than the original procedure; or c) for therapy following a diagnostic surgical procedure. This circumstance may be reported by adding the modifier 58 to the staged or related procedure. **Note:** For treatment of a problem that requires a return to the operating/procedure room (e.g. unanticipated clinical condition), see modifier 78.

**Modifier 78**

Unplanned Return to the Operating/Procedure Room by the Same Physician Following Initial Procedure for a Related Procedure During the Postoperative Period: It may be necessary to indicate that another procedure was performed during the postoperative period of the initial procedure (unplanned procedure following initial procedure). When this procedure is related to the first, and requires the use of the operating/procedure room, it may be reported by adding the modifier 78 to the related procedure. (For repeat procedures on the same day, see modifier 76).
### Modifier 79

**Unrelated Procedure or Service by the Same Physician During the Postoperative Period:**
The physician may need to indicate that the performance of a procedure or service during the postoperative period was unrelated to the original procedure. This circumstance may be reported by using the modifier 79. (For repeat procedures on the same day, see modifier 76).

11. **Note:** Both of the following specialty society documents have been considered by Moda Health in the development of this policy.

Background Information

Debridement of the sinus cavity is a procedure frequently performed following functional endoscopic sinus surgery (FESS). It involves insertion of the endoscope into the nose for a thorough inspection. Scalpels, forceps, snares, and other instruments are used to remove postsurgical crusting, diseased mucosa, or other contaminated tissue. It is performed under local or general anesthesia in a suitably equipped office setting or an operating room, depending upon the clinical circumstances of the case.

Many of the endoscopic sinus surgery procedure codes have a global period of zero follow-up days. When these are the only procedure codes performed on the date of the original surgical session, all postoperative follow-up care is separately billable.

However, a number of other closely related nasal and/or sinus procedure codes have global periods of 10 or 90 follow-up days. These procedure codes are frequently performed at the same surgical session as the FESS procedures, because the conditions they address are commonly contributing or exacerbating factors to the sinus condition(s) requiring treatment with sinus surgery (FESS).

Coding and reimbursement of the postoperative sinus debridement procedures becomes significantly more complex anytime the original surgical session combines one or more procedure codes having a 10- or 90-day global period with the FESS procedures having zero follow-up global days. There are a variety of opinions about how best to report the postoperative debridement (31237) in this situation.

IMPORTANT STATEMENT

The purpose of Moda Health Reimbursement Policy is to document payment policy for covered medical and surgical services and supplies. Health care providers (facilities, physicians and other professionals) are expected to exercise independent medical judgment in providing care to members. Reimbursement policy is not intended to impact care decisions or medical practice.

Providers are responsible for accurately, completely, and legibly documenting the services performed. The billing office is expected to submit claims for services rendered using valid codes from HIPAA-approved code sets. Claims should be coded appropriately according to industry standard coding guidelines (including but not limited to UB Editor, AMA, CPT, CPT Assistant, HCPCS, DRG guidelines, CMS’ National Correct Coding Initiative (CCI) Policy Manual, CCI table edits and other CMS guidelines).

Benefit determinations will be based on the applicable member contract language. To the extent there are any conflicts between the Moda Health Reimbursement Policy and the member contract language, the member contract language will prevail, to the extent of any inconsistency. Fee determinations will be based on the applicable provider contract language and Moda Health reimbursement policy. To the extent there are any conflicts between Reimbursement Policy and the provider contract language, the provider contract language will prevail.
