

Manual:	Reimbursement Policy		
Policy Title:	Add-on Codes		
Section:	Administrative		
Subsection:	None		
Date of Origin:	8/2/2004	Policy Number:	RPM025
Last Updated:	4/4/2018	Last Reviewed:	8/10/2018

Scope

This policy applies to all Commercial medical plans, Medicare Advantage plans, and Oregon Medicaid/EOCCO plans.

Reimbursement Guidelines

Add-on codes must be reported in conjunction with an appropriate primary procedure code by the same physician (or qualified provider) on the same date of service. (AMA ^{1, 3}) (See "Special Circumstances" below.) Both the primary/"parent" procedure code and the add-on code should be submitted on the same claim (not split claims).

Just having any primary procedure code present on the claim is not sufficient to satisfy the requirement of an accompanying "parent code." The primary/"parent" procedure code must be related and appropriate to be billed in combination with that specific add-on code.

An add-on code is eligible for payment if and only if one of its primary codes is also billed and eligible to be allowed. (CMS⁷) If the primary/"parent" procedure code is denied for any reason (e.g. incorrect coding, insufficient documentation, lack of required preauthorization, etc.), then the add-on code is also subject to denial.

Submitting an add-on code without meeting the above coding requirements for add-on codes is considered a billing error. Clinical edits are employed to identify incorrectly billed add-on codes and deny them to provider write-off. There is no modifier that will bypass a denial for an add-on code violation.

When an appropriate primary/"parent" procedure code has not been submitted in conjunction with the add-on code, a corrected claim will be needed to remedy the clinical edit denial. The denial may not be overturned or adjusted based upon a phone call to Customer Service. The billing error must be corrected.

Clinical edits for the primary/“parent” code may also affect the add-on code. Per NCCI guidelines, if an edit prevents payment of the primary procedure code, the add-on code will not be paid. (CMS 4) Also, if CCI has a PTP edit for the primary code pair (e.g. 63081/63075), then Moda Health will most likely have a PTP edit for the add-on code pair (e.g. 63082/63076), as the same coding principle for the primary PTP edit applies to the add-on code pair as well. The add-on PTP Moda Health edit will also require appropriate use of a modifier to bypass the edit on the add-on code pair.

Determining the correct primary procedure code (“parent code”)

In general, the CPT book provides specific parenthetical instructions for an add-on code indicating which primary procedure codes should accompany the add-on code. For example, “(Use 33141 in conjunction with 33400 – 33496, 33510 – 33536, 33542),” or “(Use 22585 in conjunction with 22554, 22556, 22558).” “When the *CPT Manual* identifies specific primary codes, the add-on code should not be reported as a supplemental service for other HCPCS/CPT codes not listed as a primary code.” (CMS 4)

In addition, on April 1, 2013 CMS began publishing a list of add-on codes and their primary codes annually prior to January 1. The list is updated quarterly based on the AMA’s “CPT Errata” documents or implementation of new HCPCS/CPT add-on codes. CMS identifies add-on codes and their primary codes based on *CPT Manual* instructions, CMS interpretation of HCPCS/CPT codes, and CMS coding instructions. (CMS 6)

To determine an appropriate primary or “parent” procedure code for an add-on HCPCS code, check the CMS Add-On Code edit tables.

For a few codes, the CMS add-on code edit tables list “Contractor Defined Primary Code(s).” In these cases the coder must locate the procedure code with a matching common description (e.g. the portion of the procedure description prior to the semicolon).

Special Circumstances

Type of Circumstance	Moda Health Policy for that Circumstance
Anesthesia for unplanned cesarean delivery or hysterectomy (01967 / 01968, 01969)	<p>When neuraxial analgesia/anesthesia (e.g. spinal, epidural) is provided for a planned vaginal delivery which ultimately results in a cesarean delivery or an emergency cesarean hysterectomy, two anesthesia procedure codes must be reported. 01967 is the primary/“parent” code, and 01968 or 01969 are the related add-on codes.</p> <p>When the neuraxial labor analgesia/anesthesia is initiated prior to midnight, and the cesarean delivery or cesarean hysterectomy is performed after midnight, the total anesthesia service is provided as a continuous service but the two portions actually occur on different, sequential dates. Thus, the primary/“parent</p>

Type of Circumstance	Moda Health Policy for that Circumstance
	<p>code 01967 may legitimately be billed for a different date of service immediately preceding the date for the add-on code(s).</p> <p>When a cesarean delivery is performed after a lengthy vaginal labor, the vaginal neuraxial analgesia/anesthesia (01967) and the cesarean anesthesia (01968, 01969) may be performed and billed by two separate anesthesia providers.</p> <p>Due to these considerations, Moda Health will allow 01968 and 01969 even when 01967 has not been billed by the same provider or provider group.</p>
Assistant Surgeon	<p>The primary surgeon must report both the primary/"parent" procedure code and the add-on code in order for the assistant surgeon to report assistant services for both the primary/"parent" procedure code and the add-on code. The assistant surgeon <i>may not</i> report the add-on code without an assistant surgeon modifier simply because they "did the work of the additional level/other side," etc.</p>
Co-surgery, Reporting all codes with modifier 62	<p>One co-surgeon may not report an "orphan" add-on code with modifier 62 appended for a primary/"parent" code that the other co-surgeon reported.</p> <p>Both surgeons must report both components of the related service (the primary/"parent" code and the add-on code) with modifier 62 appended.</p>
Co-surgery, Acting as assistant surgeon for each other's portion of the case (e.g. dividing up which codes are reported as primary surgeon and as assistant surgeon)	<p>The primary surgeon and the assistant surgeon must be consistent for both components of the related service (the primary/"parent" code and the add-on code).</p>
Mid-level providers (PA, NP, CRNA) working under a supervising physician	<p>A mid-level provider may not report an add-on code procedure for a primary service which was provided and billed by the supervising physician. Both services must be provided by the same person, and the primary/"parent" code and add-on code must both be billed by the same provider for the same date of service on the same claim.</p>

Type of Circumstance	Moda Health Policy for that Circumstance
Critical care, evaluation and management services (99291, 99292)	<p>Moda Health follows CMS guidelines as follows:</p> <p>When two or more physicians of the same specialty in a group practice provide critical care services to the same patient on the same date of service, only one physician in the specialty group may report CPT code 99291 with or without CPT code 99292, and the other physician(s) must report their critical care services with CPT code 99292. (CMS⁵)</p> <p>Primary service 99291 should be submitted by the first physician in the group to provide critical care services after midnight on that date of service. The remaining physicians will submit 99292 for critical care services rendered up through 23:59 on that date.</p> <p>99292 will be denied when billed on a claim without 99291 and no other physician in the same specialty group has submitted 99291 for that date of service.</p>

Coding Guidelines

“Add-on codes are always performed in addition to the primary service or procedure and **must never be reported as a stand-alone code.**” (AMA¹) (Bold added for emphasis.)

“The [add-on] service/procedure can never serve as a stand-alone code and must be reported in conjunction with another primary service/procedure.” (AMA³)

“The add-on code concept...applies only to add-on procedures or services performed by the same physician.” (AMA¹) Therefore, add-on codes may not be reported by a different physician or provider from the provider reporting the associated primary service or procedure code for that add-on code.

“Add-on codes are exempt from the multiple procedure concept, and therefore, modifier '-51' cannot be appended to these codes.” (AMA³)

“Add-on codes can be found in many sections of CPT, other than the surgery section. For example, code 99292 is found in the evaluation and management section of CPT and is used to report each additional 30 minutes of critical care time.” (AMA ³)

“Add-on code edits consist of a listing of HCPCS and CPT add-on codes with their respective primary codes. An add-on code is eligible for payment if and only if one of its primary codes is also eligible for payment.” (CMS⁷)

Background Information

Add-on codes are a specific type of supplemental procedure code describing additional intra-service work associated with the primary procedure performed, e.g. additional digit(s), lesion(s), neuroorrhaphy(s), vertebral segment(s), tendon(s), joint(s), vaccine(s), minute(s), hour(s), etc. Add-on procedures or services are performed by the same physician performing the primary service at the same surgical session or patient encounter. Add-on codes can be found in both CPT codes (Level I HCPCS codes) and HCPCS codes (Level II HCPCS codes).

The primary procedure code and the add-on code form a pair of connected services on the claim. The primary procedure code or service may also sometimes be referred to as the “parent code” for the add-on procedure code. Add-on codes may not be billed without an accompanying primary procedure code; when this occurs, the add-on code is considered an “orphan code” which has been incorrectly billed.

Add-on codes can be readily identified by specific phrases in the code description such as “each additional,” or “(List separately in addition to primary procedure).” The CPT book also indicates add-on codes with a “+” symbol to the left of the procedure code listing, and includes a comprehensive list of all add-on CPT codes in Appendix D of the CPT book. Add-on HCPCS codes are not indicated in a similar manner with a “+” symbol, but must be identified entirely on the basis of the specific phrases included in the code description nomenclature.

In addition, CMS produces a list of add-on code edits to indicate appropriate primary codes for specific add-on codes. The add-on code edits are one portion of the NCCI edits, and are available for public download on the CMS website. (CMS⁸)

It is important to note that the primary procedure code for a specific add-on code *is not the same as* identifying which procedure code is primary or secondary for multiple procedure fee reductions, nor is it the same as identifying the allowable procedure code (“primary code”) for a clinical edit (CCI or other source). While the term “primary procedure” may be used in all three situations, the context must be considered to determine which reimbursement guideline and type of “primary procedure” is being discussed.

Examples of primary/“parent” code and add-on code combinations:

	<u>Code</u>	<u>Description</u>
Primary code:	22554	Arthrodesis, anterior interbody technique, including minimal discectomy to prepare interspace (other than for decompression); cervical below C2
Add-on code:	22585	Arthrodesis, anterior interbody technique, including minimal discectomy to prepare interspace (other than for decompression); each additional interspace (List separately in addition to code for primary procedure)

	<u>Code</u>	<u>Description</u>
Primary code:	82951	Glucose; tolerance test (GTT), 3 specimens (includes glucose)
Add-on code:	82952	Glucose; tolerance test, each additional beyond 3 specimens (List separately in addition to code for primary procedure)
Primary code:	G0290	Transcatheter placement of a drug eluting intracoronary stent(s), percutaneous, with or without other therapeutic intervention, any method; single vessel
Add-on code:	G0291	Transcatheter placement of a drug eluting intracoronary stent(s), percutaneous, with or without other therapeutic intervention, any method; each additional vessel

IMPORTANT STATEMENT

The purpose of Moda Health Reimbursement Policy is to document payment policy for covered medical and surgical services and supplies. Health care providers (facilities, physicians and other professionals) are expected to exercise independent medical judgment in providing care to members. Reimbursement policy is not intended to impact care decisions or medical practice.

Providers are responsible for accurately, completely, and legibly documenting the services performed. The billing office is expected to submit claims for services rendered using valid codes from HIPAA-approved code sets. Claims should be coded appropriately according to industry standard coding guidelines (including but not limited to UB Editor, AMA, CPT, CPT Assistant, HCPCS, DRG guidelines, CMS' National Correct Coding Initiative (CCI) Policy Manual, CCI table edits and other CMS guidelines).

Benefit determinations will be based on the applicable member contract language. To the extent there are any conflicts between the Moda Health Reimbursement Policy and the member contract language, the member contract language will prevail, to the extent of any inconsistency. Fee determinations will be based on the applicable provider contract language and Moda Health reimbursement policy. To the extent there are any conflicts between Reimbursement Policy and the provider contract language, the provider contract language will prevail.
