

Know the facts about breast cancer

About one in eight women in the United States will be diagnosed with breast cancer. Surprised?

According to the Centers for Disease Control and Prevention, breast cancer is the number one cause of cancer death in Hispanic women. It is the second-most common cause of cancer death in white, black, Asian/Pacific Islander and American Indian/Alaska native women.

If you're a woman, talk to a doctor about your risk for breast cancer, especially if breast or ovarian cancer runs in your family. Your doctor can help you decide when and how often to get a mammogram.
